Examiner's Statement of Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: Claims 1-17 are allowed because the prior art fail to teach that the "interface of the two conductive solid materials is substantially parallel to the magnetic field" and "the magnetic field is orthogonal to the gravity", in combination with the remaining limitation of claims 1-17.

SU 1346977 discloses the device in the field of applicant's endeavor. SU does not teach joining melting materials along the gravity direction. Although Wilcox teaches joining melting materials along the gravity direction, Wilcox does not teach applying a static magnetic field orthogonal to the gravity while joining melting materials along the gravity direction. Therefore, in light of criticality of the step of applying the static field orthogonal to the gravity while joining the materials along the gravity, and upon further consideration, the Examiner concluded that the combination of SU and Wilcox lacks motivation and the claims are allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
